Brava Roof Tile develops and manufactures Synthetic Architectural Roofing Products in genuine profiles, including Spanish tiles, Cedar shakes, and Slate roofing. Utilizing its proprietary compression molding technology, Brava Roof Tile creates the authentic beauty of its natural counterparts in a lightweight, durable, and environmentally friendly material. Brava's roof tiles are made of 100% recycled post-industrial plastic and have received third-party testing certifications for Class 4 Impact, Class A fire, and up to 150 mph wind. These composite roofing products last longer, are far more durable, and are aesthetically and architecturally pleasing than asphalt shingles, concrete tiles, slate, shake, and clay tiles. Brava composite tile is the best alternative to traditional Spanish clay, natural slate, and cedar shake roofing! The Brava Roof Tile Product Catalog offers product information, specifications, and installation instructions for roofing materials and accessories.
