Fall Protection Guardrail Systems, LLC, in Raleigh, North Carolina, manufactures and sells guardrail systems that meet OSHA regulations throughout the United States and Canada. The Bodyguard Rail System is a unique fall protection guardrail system that is rugged, lightweight, and easily installed and dismantled in minutes. With its industrial paint finish and durability, The Bodyguard Rail systems will give you excellent service for years. These fall protection guardrail systems are easy to assemble and install, allowing you and your workers to focus more on the job. Each guardrail box comes complete with an instruction manual. These instructions provide not only worded instructions but also diagrams of your guardrails for you to visually see how they are assembled and attached to the roof or flat surfaces. These guardrails are designed with special roofing feet that enable workers to install the rails underneath shingles so they do not damage the roof. Each box of accessories also comes with an instruction manual to show how the accessories work hand in hand with your new guardrail system.
